

Lab Report Content

1. Process creation and termination, thread creation and termination
 - a. Process Creation and Termination
 - b. Thread Creation and Termination
2. Simulation of IPC techniques
 - a. Sleep and Wakeup
 - b. Producer Consumer,
 - c. Sleeping Barber, and
 - d. Dining Philosopher Problem
3. Simulation process Scheduling algorithms
 - a. First-Come, First-Served (FCFS) Scheduling
 - b. Shortest-Job-First (SJF) Scheduling
 - c. Priority Scheduling
 - d. Shortest Remaining Time
 - e. Round Robin(RR) Scheduling
 - f. Multiple-Level Queues Scheduling
4. Simulation of deadlock avoidance and deadlock detection algorithms
 - a. Ostrich algorithm
 - b. Banker's Algorithm
5. Simulation of page replacement algorithms
 - a. FIFO
 - b. LRU
 - c. MRU
 - d. OPR
6. Simulation of File allocation techniques
 - a. Best fit
 - b. First fit
7. Simulate free space management techniques
 - a. Bitmap
 - b. Linked List
8. Simulation of disk scheduling algorithms

- a. FCFS,
- b. SSTF,
- c. SCAN,
- d. CSCAN,
- e. LOOK,
- f. CLOOK

9. Demonstration of basic Linux Commands
